Active Directory Explorer (ADExplorer) is a graphical, multi-window tool for Active Directory. Its windows look like a plain calendar on screen and work like full-fledged windows. By default, the tool has four main windows: Schemas, Users, Groups and Computers. In a typical scenario, you open the schema windows first so as to add new records into Active Directory. The schemas contain all the information about objects like trees, groups, users, computers, and many more. Users and groups are classified as groups and have properties like name,

description, member, and much more. Computers are identified by serial numbers and in turn have properties like operating system, free disk space and more. Users and groups can be added or deleted. Computers can be modified or added. Once users and groups are identified, they can be assigned permissions to access the Active Directory database. Active Directory Explorer supports all Microsoft Windows 2000 / NT 4.0 / 2000 Network Operating System (NOS) editions, including Windows 2000 SP2, Windows 2000 SP3, Windows 2000 Server 2003, Windows Server 2003 SP1, Windows Server
