Early Access of the IntelliType technology enabled users to create text, paragraph, figure, and tables that automatically adjust to a series of customizable editing parameters such as text size, character spacing, and character style. On September 22, 2012, at NACO 2012, Autodesk announced the discontinuation of the IntelliType product and an open beta version of AutoLISP on AutoCAD Crack 2012. This was the last version of AutoLISP and the last version of AutoCAD Serial Key to include IntelliType technology. AutoCAD 2015 AutoCAD 2015 is the successor to AutoCAD 2014 and AutoCAD LT 2014. Changes in AutoCAD 2015 include: Engineering GIS AutoCAD has supported the ECW (Encapsulated PostScript) file format, which was originally created by Hewlett Packard, but is more commonly known as "HP-GL" or "ECW". It is an old format that is not supported in all platforms and in some cases, even by HP itself. In response, Autodesk have created a native Engineering GIS format which is an ECW compatible format that can be read and edited by Autodesk software such as AutoCAD, AutoCAD LT and AutoCAD Civil 3D. AutoCAD has no option to edit a custom Shapefile. However, in AutoCAD 2015, there are now two options to export to a file format known as "Geodatabase". The first is the TAB format, which is the file format for a more traditional GIS database such as Oracle, MySQL, or MS Access. The second format is the ESRI "Geodatabase" format. The ESRI format is based on their own GDB format, which means the file can be imported and edited with ESRI software. Both file formats can be edited with the tools available in Autodesk Map 3D. Raster Effects AutoCAD Raster Effects have been enhanced. In AutoCAD, Raster Effects include Adjustment layers and Raster Styles. Adjustment layers allow a user to manipulate each layer in a raster file, while Raster Styles control the properties of a specific region of a layer. Both have new features in AutoCAD 2015. In addition, there are new Raster Effects such as Node Tint and Edge Tint that allow control of the coloration a1d647c40b

Keep track of changes, version, and user data. Review the documentation for Markup Assist, and get an overview of what's new in AutoCAD 2023. "Be more efficient in the workplace, by using the latest technology available to you." Enabling better collaboration in design teams Collaborate with your colleagues more efficiently by being able to view each other's designs and annotations. Enabling everyone in the design team to work simultaneously and interactively on one drawing. New drawing toolbar: New ability to scroll smoothly while selecting. Improved AutoConnect, the way to incorporate other drawings into one's own. Scalable icon mode: Icon mode adapts to the size of the screen by scaling the icons and toolbars automatically. All new drawing commands: New utility tools for the Drafting, Printing, and Drawing Dashboards. AutoConnect: Get notified when other users make changes to drawings on shared online repositories. Get connected to your collaborators in seconds. Revisit drawings Refresh all the content on a drawing, including comments, annotations, and markings. Use the refreshed drawing to continue working on the latest version of your drawings, or to undo changes made on previous versions. Revisit changes and annotations made by other users on the drawing Made it easier to check out your progress: Different ways to reference the drawings available on the Dashboards, in the new "Existing drawings" section. Stay up-to-date with new version numbers: Show latest version number of the drawing directly on the drawing canvas. Improved PDF rendering The rendering of PDF documents has been improved to ensure even better results, particularly when displayed on larger screen sizes. Improved stability and performance Improved the stability of the user interface for AutoCAD 2023 and related products. Improved the performance of AutoCAD, AutoCAD LT, and AutoCAD MEP. New features for mathematical calculations A new type of mathematical operator has been added to AutoCAD, allowing you to add or subtract two quantities with one operation. The new "+" and "−" operators perform all the operations in the respective directions and have the following properties: The operation is performed in the order of the parameters being specified. The order
