GST is to be collected from the place where the supply to.. IBC works out automatically to the correct amount to be paid to.. The present GST rates is 28. Mandibular advancement using the miniscrew system: functional and morphometric results at a mean follow-up of seven years. Based on the principle of minimally invasive orthodontic procedures, the aim of this study was to assess the efficiency of a new mandibular advancement (MA) device, the miniscrew system, in terms of Angle Class and occlusion. Twenty-four consecutive patients treated with this device were enrolled in the study. They were rated clinically and radiographically at T1 (inclusion) and T2 (end of the treatment), and again after a mean follow-up of 7.2 years (T3, after retention). The results showed that the mean advancement achieved with this device was a mean of 6.9 mm and 6.8 mm in the left and right sides, respectively. The occlusal contacts were preserved at T2, whereas at T3, all incisors had occlusal contacts with antagonists. In 23 patients, the Angle Class I-II range was complete after treatment. The dentoalveolar height was found to be statistically stable ($P = 0.25$), whereas the width was found to have slightly decreased ($P = 0.03$). The morphometric parameters showed a tendency for a posterior downward and forward rotation of the lower incisors. At T2, the total mandibular length had increased by a mean of 1.8 mm and 1.3 mm for the left and right sides, respectively. At T3, the total mandibular length was unchanged and the anterior and posterior widths increased by a mean of 0.4 mm and 0.3 mm, respectively. This study shows that the miniscrew system is a safe, efficient and minimally invasive method to advance the mandible. Here, we focus on the coefficients that correspond to the complex Dirac operator and neglect those in the effective scalar action. The result is an expression for the propagator of the form $D^{(\Gamma=1)}(Q, \bar{Q}) \simeq \frac{1}{\beta^2 \pi^2} \exp\left[-\frac{\pi^2}{\beta^2} \left[-Q \bar{Q} - \frac{\pi^2}{\beta^2} \right] \right]$
