Is there an easy way to get info like % of CPU, Mem, Disk and Network usage per process? As I'm looking for a way to monitor the state of my server when it fails over to another server, I need to know if it's has failed and how long it's been up. A: In your service application you can call: MSWMI.Win32_Service -Filter "name = '\$SERVICE_NAME'" -Property DisplayName, ServiceName, ServicePath, Status, Running, Started, StatusMessage, Password, StartType Where password and starttype are yes/no. ServiceName is the name of your service. The typical usage is to get the list of services, filter by name, then get the properties to get the values you're looking for. Here's more info on the properties μL of the reductase substrate, 100 μL of the buffer containing CDNB, and 900 μL of distilled water. The absorbance was measured at a wavelength of 412 nm
