This is a project based on the concept of balancing between ethics and technology. It is very similar to my independent research paper, but in a much shorter length. I chose to focus on ethics because I know that most of you will be conducting research on this topic; and because of the importance of ethical standards in research and ethical practices. This particular project uses the Internet as a medium to communicate with my audience. Ethical issues arise from this usage. But the positive side of using the Internet for research and communication is that I can share my information with many people at once, and get feedback from them all. The positive side of ethics and this project is that many people will be able to read what I have to say and give me feedback. I can see that I am gathering all the required knowledge, and therefore learning things along the way. I feel that I have gained enough knowledge in this project that I will be able to continue this in the future. So now that you know a little about me and my project, I'd like to show you my project itself. I will be presenting all the necessary information on how to use this project in my Introduction section, and in the Detailed Methodology section. The only thing that I don't think about is the Sources section; but I could have more sources, especially for information on Internet usage. Introduction Ethics is defined as a principle of right and wrong. Internet ethics is the set of rules and principles that people use to decide what is right and wrong when it comes to using the Internet. The following topics relate to Internet ethics. FTC and the Internet The best and the worst of the Internet: FTC vs. the Internet Other views Copyright: You are legally protected to make copies of copyrighted materials Copyright laws and the Internet Sending personal information to a company The history of the Internet The Internet as an agent of change Timeline of the Internet Timeline of electronic mail Timeline of computer software Timeline of the Web What's on the Internet Premise of the Project I believe that most people will agree that using the Internet is the best way to communicate. Most people use the Internet because it is more convenient and less time-consuming than other methods of communication. Because the Internet is so convenient, we use it without thinking about it. I believe that using the Internet is important to learn about Internet ethics. I believe that people have the right to know about Internet ethics and how to 77a5ca646e
