---

the development, publication, and dissemination of research and education activities. More InfoThe present invention relates to a new and distinct cultivar of coleus plant, botanically known as a Coleus plant, hereinafter referred to by the cultivar name 'Pacolmidi'. The new cultivar originated from an induced mutation in a hybridization made in September, 2006 in Gilroy, Calif. The female (seed) parent of the new cultivar was the proprietary coleus plant 'Coleus W2' (U.S. Plant Pat. No. 16,691). The male (pollen) parent of the new cultivar was proprietary coleus plant 'Coleus W2-1' (U.S. Plant Pat. No. 16,691). The new coleus cultivar was selected in a cultivated area of Gilroy, Calif., in November, 2006. Asexual reproduction of the new cultivar by terminal stem cuttings since November 2006 in Gilroy, Calif., and West Chicago, Ill. has demonstrated that the new coleus cultivar reproduces true to type with all of the characteristics, as herein described, firmly fixed and retained through successive generations of such asexual propagation. A few months ago, we published the first ever P2P Payments Market Outlook report, outlining the types of research projects and technology use cases that can be performed using our platform. But that report was really

---

only a snapshot in time. In recent weeks, we've been making minor tweaks to our platform to increase the level of flexibility and accuracy for prospective market researchers, and we wanted 1d6a3396d6

Mid2Scilab is a simple tool to enable users to convert Midi files notes for each channel to Scilab / Octave code. This is useful for instruments simulations and analysis. Using this filter you can test your instrument model on the existing Midi file. Substitute Click the Substitute option on the menu bar: Click on the Browse icon for Open a file: Click on the Browse icon to open the file which has the Midi file notes: Select the instrument note: Set the number of the note you want to convert to code: Click the Update button to convert the note: Save the Midi file if you like the conversion result. Viewer of the MIDI file: Convert Midi file notes to code using the Mid2Scilab: Download Mid2Scilab and open it. Click on the Options menu bar: Click on the Browse icon to open the MIDI file. Select the note you want to convert and set the channel number: Click on the Update button to convert the note to code: Save the MIDI file if you like the conversion result. Revert Midi file notes to Midi file notes using the Mid2Scilab: View the selected MIDI file: Right click on the track with a note to select: Select Substitute on the context menu: Click on the Browse icon to open the

---

MIDI file: Select the note you want to convert and set the channel number: Click on the Update button to revert the note to the original MIDI note: Save the MIDI file if you like the conversion result. Example The Midi file notes are set to the first note of the "note" object (instrument\_name = "square"); Click on the Substitute option on the menu bar: Click on the Browse icon for Open a file: Click on the Browse icon to open the file which has the Midi file notes: Select the instrument note: Set the number of the note you want to convert to code: Click the Update button to convert the note: Save the Midi file if you like the conversion result. Example The Midi file notes are set to the first note of the "note" object (in

#### What's New in the Midi2Scilab?

Midi2Scilab is a simple tool designed to enable users to convert Midi files notes for each channel to Scilab / Octave code. This is useful for instruments simulations and analysis. Using this filter you can test your instrument model on the existing Midi file. Midi2Scilab Features: GUI Support: Windows, Linux, MacOS GUI for Midi2Scilab is designed in Gnome and based on GTK. Midi2Scilab is a GTK based
