Geometry Commands Concepts | Models | Exporting | Sectioning The most useful commands for creating and editing geometry are: Rectangles: RECTANGLE Polylines: POLYLINE Circles: CIRCLE Ellipses: ELLIPSE Axes: AXIS Geometric primitives can be moved, scaled, rotated, and positioned. They can be connected, cut, and exploded. All of the geometry commands can be found on the Geo tab. Rectangle: RECTANGLE The RECTANGLE command creates a rectangle, which is a two-sided, rectangular shape. Rectangles are useful for creating geometric shapes such as window frames, cabinet boxes, and doorjambs. Rectangles can also be used to join separate entities together. Rectangles can be selected with either the mouse or by pressing the CTRL key while selecting. To move the current rectangle, click and drag the rectangle. A polyline is a single entity and can be a single point, a closed polyline, or a closed polyline with a single linetriangle or crossing loop. The POLYLINE command creates a closed line or polyline. A closed line is a line that has no endpoint and no self-intersection. A closed polyline is a closed line that is connected to a second line or polyline. A line has three points. Users can download and install the program from AutoCAD.com. AutoCAD LT has an installation time of about 30 minutes and a runtime of 30 minutes. The software can also be purchased from authorized resellers, e.g. Pro/Engineer Software. The AutoCAD LT program has a user interface designed to be used by those with no prior experience with CAD. It has a simplified toolbox that allows the user to create simple 2D drawings in minutes. It also has a simple interface, which is meant to be accessible to users with no CAD experience. AutoCAD LT has been criticized for limiting the drawing features available, such as the lack of native 2D parametric modeling or the ability to edit 3D solids. It is, however, the only version of AutoCAD designed to be used by non-technical users. AutoCAD LT is compatible with the following operating systems: Microsoft Windows 95/98/Me/NT/2000/XP/2003/Vista/7/8/8.1/10 Linux AutoCAD LT for Mac OS X (Mac) Release: March 18, 2011 AutoCAD LT for Mac is similar to its Microsoft counterpart and is released as part of the same subscription program (AutoCAD Subscription). Unlike AutoCAD, which has a Microsoft Windows executable, the Mac version runs on the Mac OS X operating system. It is available for Mac OS X version 10.7 and later only. Like all other AutoCAD LT programs, AutoCAD LT for Mac has a user interface designed to be used by those with no prior experience with CAD. It has a simplified toolbox that allows the user to create simple 2D drawings in minutes. It also has a simple interface, which is meant to be accessible to users with no CAD experience. You can also use annotations to quickly create your own symbols. Improved integration with AutoCAD's drawing tools: The AutoCAD Graphics User Interface (GUI) and graphic-based commands are now faster and more responsive to your input. New commands have been added, such as the ability to hide objects that are not visible in the current view. Automatically and accurately place your lines, circles and text objects. AutoLISP: With AutoLISP, you can create dynamic objects and commands that can be reused in multiple drawings. You can specify the style for the straight, arc or loop lines and select the style for the self-intersecting line. The Copy command is now three times faster than it was in AutoCAD 2019. Path effects are now always drawn to display their entire path. The command-line interpreter now supports Unicode characters, making it easier for you to interact with text and symbols in the command-line environment.
