## Argente Autorun Crack+

A utility that enables you to quickly locate applications or processes that run at system startup. Screenshot of Argente Autorun in action Review of Argente Autorun There is a big list of basic features in Argente Autorun and a few additional ones. There is a search box and it enables you to easily locate an item. However, to get more information about a selected item, you have to press the F4 key, which is a bit tedious. Furthermore, the available context menu allows you to hide or enable a process from the startup list, but you can only disable one item at a time. An alternative is to create a batch file that calls a selected program and specify an option with the Batch command, but there is no support for the optional parameters. Finally, there is a scheduled task manager that enables you to detect and edit the scheduled tasks that runs at the startup. It is nothing more than a simple reminder feature. Argente Autorun is a very simple and easy to use program that offers a lot of basic features. Freeware for 30 days Update Tuesday, July 31, 2018 Argente Autorun is a simple utility that enables you to quickly locate applications or processes that run at system startup. If the built-in Windows utility isn't exactly your very own cup of tea, you are strongly recommended to have a look at this one. It's not much harder to use, but instead it offers an interesting pack of features that require just basic computer knowledge. First of all, Argente - Autorun shows the startup items and lets you disable, delete or edit any selected process. Additionally, the app also enables you to add a new program entry to startup list by providing the path to the executable file, while a search box is also there to make sure you can find an item with minimum effort. A very good feature available is the backup manager that allows you to save a selected configuration and restore it at a later time. Furthermore, the application allows you to analyze the scheduled tasks and services set to run at Windows startup. Simply put, Argente - Autorun is just a handy replacement for the standard Windows tool. It brings an extra backup tool, but other than that, it's very hard to be impressed. Menu.

- When installing a program (Setup), the setup program will check the autostart folder (or registry) to see if the application is already installed and run it. If not, it will start the program. If it is installed, it will just run it without checking for another version.
- Autostart contains 3 types of files:
  - Config file: Contains the program information (app id, app path, etc.)
  - Registry entry: Contains an entry for the specific application
  - Autorun.inf: Contains the autorun information about the application (program name, app name, etc.)
