Deep Freeze Server Standard Crackl EXCLUSIVE

0 supports a data transfer rate of 16 GT / s (approximately 2 GB / s. n s per lane) in contrast to the speed data transfer rate of 8 GT/s for PCIe 3.0. To organize this throughput, the motherboard must be equipped with two PCI-E 3.3. There are two connection options: serial or parallel. The length of each wire can be 25 mm (on the board itself, on the M.2 bus - 15 mm). Accordingly, both options have their pros and cons. In the first case, the length of the wire can be chosen by a limitation, for example, of a motherboard with two PCI Express x16 and PCI ports. The second case is more optimal: the 1st connection option allows you to connect four PCI ports, and the 2nd - only two. The processor part turned out to be interesting. The board has four video outputs, two of which support the PCI 3.1 x16 (Dual Gigabit) interface, and two - PCI x1 (one for PCI; the other for PCL-E x1). Additionally, there is an audio output for connecting headphones, although the battery life in music mode will be less than in PCI E mode (by 30%), since the audio outputs are not used for power. However, if you increase the power consumption of the processor, then the battery life can be doubled. There are no connectors for motherboard and expansion cables, although there is a PCI port for the PCI slot and a couple of standard connectors for video card connectors. On the rear panel there are two SATA ports, one of which is used as a bus for connecting a printer. In addition, all ports of the board are located not far from each other (adapter cases are not provided). There are also two USB 3.2 ports and an HDMI output, as well as a Mini DisplayPort connector that can be used to connect a monitor. In addition, there was a place for one more wire - a three-pin UDMA connector for connecting an external hard drive and a microphone. In general, we can state that the board has a good set of connectors for the PC/104 interface, which will allow you to connect almost any computer to it. In addition, the board has 12 USB 3, SAT A and 6 SAT B ports (2 external, 4 internal), two PCI slots, two SATP ports, one PCI (support for up to 4 MB of RAM - Linux 2.
