What's New in This Release:

What's New In?

RadCor contains several presets which can be saved to your desktop, and are automatically loaded when you run RadCor. By default, RadCor will auto-correct the most common image distortions. The application allows you to load/save your own presets using the simple user interface. This feature is more for advanced users, and is highly recommended to be used along with RadCor. Main Features: * Corrects radial distortion in your pictures. * Converts colors automatically (for better colors). * Resizes pictures and prints images, including in grayscale. * Supports JPEG, PNG, TIFF, PSD, GIF, and BMP formats. * Supports saving of presets in .ini, XML, and JSON formats. * Create your own presets, load them or save them in .ini, XML, or JSON formats. * Simple user interface. * Automatic corrections will not correct geometric distortion, polar distortion, and perspective distortion. * This application works with most cameras, but it may not work with all models. * The "Improved RadCor" version can be used together with RadCor. Requirements: * Windows 7 and higher. * .NET Framework 4.5.2 or higher. * Internet connection for updates. For users: When you start the application for the first time, you will be prompted to insert a USB key. This key is the same one that RadCor will use to save your presets. * The user's default settings (which will be saved in the application's settings) will be saved to the USB key. * The user's settings will be loaded when you run the application for the first time. For developers: If you are a developer, you can use this application's sample code to learn how to save and load presets. Documentation: RadCor's web site contains more detailed information about the program's features. Please note: RadCor is a free tool. It can be useful, but will not always work correctly. (Visit the web site for more information) Contact: If you have any problems, please contact support@radcor.com. Effects of resveratrol on matrix metalloproteinases and growth factors in high glucose induced human vascular smooth muscle cells. In diabetic retinopathy, high glucose levels can affect the microvascular system. Excessive extracellular matrix (ECM) accumulation is one of the characteristic hallmarks of diabetic microvascular complications. Vascular smooth muscle cells (VSMC) are the most abundant cells in the tunica media of microvessels and play a key role in ECM accumulation and vascular remodeling. A direct link between hyperglycemia and ECM accumulation and vascular remodel
