In 2011, Autodesk split its CAD product line into three distinct divisions: AutoCAD, Inventor, and Fusion 360. AutoCAD is a 2D/3D CAD/drafting application. It is marketed as a desktop CAD application for the Windows, Mac, and Linux platforms, but can also run on mobile and web platforms. Inventor is a tool for generating 3D models and designing in 3D. It is marketed as a desktop CAD/3D application for the Windows, Mac, and Linux platforms. Fusion 360 is a cloud-based 3D software-as-a-service product for creating prototypes and 3D model files. Uses OpenGL for rendering images, so it is not dependent on a particular operating system. Hardware History Autodesk began work on AutoCAD as a 2D drafting program, one that would work on both the Apple Macintosh and MS-DOS PC platforms. They wanted a program that would be able to produce engineering drawings in a portable format. They chose to use PostScript to produce these drawings, and initially shipped AutoCAD version 1.0 on December 9, 1987. The original price was US\$495. Version 1.0 included functions such as direct-polyline sketching, basic drafting tools, block-level dimension tools, and a user interface. Version 2.0, released in September 1989, introduced the user interface, and improvements in precision over version 1.0, but the price remained at \$495. With version 2.0, the price of AutoCAD was reduced to \$350. Version 2.5 (released on September 13, 1992) was the first of the current product lines, and was considered to be a major update. It introduced updated graphics and functions for creating and editing drawings. Version 3.0 (released

on April 19, 1995) was the first release on a Mac platform, and introduced a new command-line interface. This release was also the first to allow integration with other software on the platform through the use of a shared library. This was extended by AutoCAD 3.5 (released on August 17, 1998), which allowed for integration with applications using direct X events. This also allowed user-defined functions to be written in AutoLISP, which were then executed by the application. Version 4.0 (released on January 18, 1999) introduced a completely new user interface, the ability to use a mouse in preference to a keyboard, and was considered to be the first 'real' release for the AutoCAD brand. This version also introduced the ability to work with DWG files, and supporting other file types such as DXF and PDF. The AutoCAD 2008 Editor (released on December 6, 2006) added support for non-native files, allowing the creation of files in Adobe Illustrator or Photoshop, and allowing for viewing of DXF files in layers, along with improved editing functions. In February 2010, AutoCAD 2010 introduced a major change to the user interface. The new UI is a replacement for the ribbon interface. In 2011, AutoCAD 2012 was introduced with a new ca3bfb1094

If I have a web page, e.g. and I want to scrape the text of the product:H1B\_B7D line. How would I do this in Python? A: Maybe you can use BeautifulSoup to do that, as it is intended for crawling HTML and parsing the data you want. It would do the job just fine. It has been a while, but I remember that I used that program a few years ago. In your case you just have to do something like this: `from BeautifulSoup import BeautifulSoup soup = BeautifulSoup(html) print soup.find('h1', {'class': 'product'})` This will give you the line you're looking for. ## What's New In AutoCAD?

Multiple device management: Quickly work with multiple CAD devices, including computers, tablets, and smartphones, on a single drawing. Embed an entire CAD database: Bring an entire CAD database into AutoCAD. Annotations: Create comprehensive annotations and comments on drawings. Software Improvements: Embed workflows and customize navigation. AutoCAD's pen tablet is ready for a whole new generation of users. Let's look at all the new features that are coming with AutoCAD 2023: Features that are currently under development Rendering/Architecture Data in BIM 360, such as images, is coming with AutoCAD 2023. A major new feature to CAD users is the introduction of BIM 360 rendering and rendering of CAD models in BIM 360. This functionality is currently being developed, so there are no preview images available yet. With rendering and BIM 360 data, users can insert CAD models from your company's CAD systems into BIM 360, and you can create new metadata. All your CAD drawings are also being optimized for BIM 360, so you'll be able to easily export to the cloud. Work with Print, Draw and Communicate: Working with print, PDF, and PowerPoint documents is now easier than ever with the addition of the new Markup Import and Markup Assist dialog. Add drawings from other applications right into your AutoCAD drawings. The function is installed automatically. With the Markup Import function, you can import Markup files from applications like Adobe Illustrator or Adobe InDesign. Once you import a graphic, you can apply the Markup to it, and all other drawings linked to that Markup file will then be marked up too. With the Markup Assist dialog, you can preview and edit Markups to make them even more accurate and adapt to your drawings. AutoCAD's Markup engine is also new. A new interface allows you to mark up layers and ungroup layers, create and edit groups, and create and edit symbol layers. It is also possible to combine symbol layers with groups. The various options to choose from when marking up layers include selecting layer color, line width, line color, gradient, shading, and pattern. You can also change the text color and
