Free Elden Ring Crack + For PC

Q: WPF, the "MoveLeft" command on a double-click event jumps forward/backward When i handle a LeftClick or DoubleClick, the "moveleft" command is triggered. The problem is that it jumps to (0,0) If i don't need to see the mouse cursor, i don't add the WindowKeyboardNavigation, but the problem is just the same. To be more precise, i can't choose another position on the grid. Any ideas? Thank you A: You can disable the standard Window key navigation on the window from the Themes/WindowStyle A: I don't know if this helps, but you can also disable the Window's focus from the following method : this.DefaultFocusedElement = this.grid; When the method is called, your grid control loses its focus and if you have not made it a focusable control, a new grid control is created, which is not focusable either. (The focus remains with the old grid) EDIT As @Rajith Gianluca
