A: You should use this regex : `returnsRegex = re.compile(r'[\w\u00c0-\uFFFF-]{20,}')` hope this will do
Q: CSS jquery conflicts is there a way to do this: `css: .mainmenu ul li{ display:inline-block; }` `js: $(document).ready(function(){ $(".mainmenu ul li:first-child").addClass("on"); });` but so the js doesn't override the css?
A: if all you need is to change the CSS rule on first child, you can just use `:first-child`. That's not a query selector and will not be overridden by any javascript.
`jsFiddle Demo` However, if you need the CSS to apply to an element regardless of its

siblings, you can wrap it in a class and add the class using javascript. Something like: `$(".my-wrapper-class").addClass("on");` 2, asymptotic behavior of Gaussian multiplicative chaos In probability theory, the Gaussian multiplicative chaos (GMC) is the limiting Gaussian random variable obtained as the Hausdorff–Young limit of a Gaussian free field (GFF) More precisely, for a compact metric space X , let $GFF(X)$ be the Gaussian function field on X , i.e. the Gaussian (i.e. Brownian motion with a random variance) continuous function fields on X . For $GFF(X)$, we define the GMC for a probability measure μ on X , with compact support, as where is a GFF on C given by the RHS. See also Gaussian free field References

A: I think you have just cut and pasted too much and not tested the code. Try with

something more simple like: `for(String text : lines){ if(text.matches("\\.rar")){ remove(text); } }` Example result: Some.rar tamil.thriller.tv.series.17.8gb rainaseles Edit: If your file is in fact a rar archive, then try this:

```
try { BufferedReader rr = new
    BufferedReader(new FileReader(new
File("output.txt"))); String line; while ((line =
    rr.readLine())!= null) { if
(line.matches("\\.rar")) { //remove the line
    from the input } } } catch
(FileNotFoundException e) { //file not found }
catch (IOException e) { //unhandled
```

```
IOException }
```

I think the answer is the way, as there is no need for regex. Q: Android: How to calculate fps I would like to get the fps of my android app. I have seen different ways of calculating it, most of them using the timer class but I have seen that on some devices the timer has a very low precision and on some other if I calculate the difference between two calls to the timer it will return negative values.

In my case, I want to calculate the fps by taking the time it takes between 2 calls to the `MainActivity.onResume()` and dividing it by the

time it takes for the MainActivity to be resumed. Is there a way to get a very precise result for the fps? A:

`android.os.SystemClock.elapsedRealtime()` Q:

What to do when a paper is rejected for reasons unknown to the authors?
