## PlayClaw 7 - Standard Extension Trainer [32|64bit]

Narwhal Heist is an odd, comical first-person stealth-platformer game about a narwhal breaking bad. As secret agent Wally the Narwhal, you must rob houses, break into stores, and complete other various contracts in order to collect money to save your family. Professor Wigglywams, an ex-spy and notorious criminal, has kidnapped your wife and son for a \$5,000,000 ransom. Your mysterious partner-in-crime, an unnamed agent, will provide you with contracts and information - but it's up to you to complete them. You're a Narwhal, Wally - your horn is a blessing and a curse. It allows you to reach high up or distant objects, but be careful, because even slight contact with a fragile object will cause it to shatter instantly, leading to your arrest. Between contracts, you stay in a fish tank since you still need water to survive. Because of this, you always show up to contracts soaking wet - and wet means slippery. Comical stealth - Being spotted by cameras, motion detectors, or people will result in your cover being blown and you being apprehended. Breaking anything (and believe me, there is a lot to break) with your horn or body will result in immediate arrest. With these two drawbacks, your goal will not be an easy one to achieve. Seven base contracts - Throughout seven base contracts, you can earn money, gain experience, and inch your way closer to success. From your first house robbing to taking down Wigglywams Inc., each contract brings its own unique mechanics, obstacles, and objectives for you to encounter. Note: During the early access period, some levels may not be available. All seven levels will be available upon official release. Black Market - Come on, you didn't think there were only seven contracts, did you? In addition to new side contracts, you can buy upgrades, new game modes, and cosmetics in the Black Market using the money you've earned from previous heists. Note: During the early access period, many Black Market features may not be available (including contracts, game modes, and cosmetics). An in-depth Black Market system will be available upon official release. We know there's a large community out there determined to torture themselves in meticulously completing games in the quickest amount of time possible. Because of this, speedrunning is more than just an afterthought in Narwhal Heist. The levels and mechanics have been designed with speedrunning

The need of its existence. The Redwall series, written by Brian Jacques, is one of the most successful role-playing series in the fantasy genre and among the most successful science fiction series for kids. And although the series has been written in many children's books with different plots and backstories in the years that have passed, its most popular depiction has been the adventures of my beloved little band of Simon and his friends, as they follow their own adventures in the vast and colorful fantasy landscape of Redwall. The remarkable series has sold more than 9 millions copies in some 50 languages and the popularity of Brian Jacques as a fantasy writer keeps growing. In 2005 he has won a prestigious international award given by the Society for the Study of Fantasy literature, which consists of 2000 professional writers from more than 20 different countries. However, what has made the series so successful is not only the battle scenes: just about a short chapter has been focused on the combat sequences, more specifically on the use of certain battle formations and the use of weapons. In the Redwall series only weapons that are "stun mauls" exist, in other words, heavy weapons, made with wood. The writers of the Redwall series have created all the weapons being used by the characters in a logical way and so the stone axes, halberd, maces, even swords and shields can be used in a highly effective way in a battle situation. Even a paper in the American d20 System's official freelancer Robert J. Heidegger says about the sequence: "The Redwall series is a rather difficult series to write, particularly combat, because there's no real equivalent of the medieval weapon technology in the D20 setting." and Heidegger explains how the same weapon could be better used through a different method: "There are several very flexible weapon tactics in the Redwall series. The villains' basic tactic is to besiege the Abbey and wait for all the red walls folk to surrender before pushing in to kill as many as they can. It's a typical siege warfare tactic, using the power of rock-hurling water mages. Attacks from the flanks and behind can cause problems for the defenders, because you have to worry about surprise attacks. A classic siege situation. The defenders could kill the mages in this type of siege, because the mages have no real way to counter the attack. In that case, the mage becomes just another fighting unit for the attackers.
