not only of words but of action too. The Internet was created when computer scientists and telecommunications engineers came together. The Internet is a network of networks that enables two-way interaction between users. It is a network of networks that is vital to the world economy, allows for the free flow of ideas, and allows for the free flow of information. The Internet will continue to get bigger every year until it can accommodate more and more people, goods, and services; until it can enable more and more people to live in a world with more and more resources. We will continue to do what the American engineers who created it have always done: we will do things that didn't exist before. We will invent, discover, explore, and then we will invent, discover, explore, and so on. It is as though we were not human beings but we were born into the Internet. We are part of the Internet and the Internet is part of us. We are all human beings in the future. We will continue to live in a world of networks. We will continue to live in the future. The Internet didn't invent the future but the future invented the Internet. That is why we can't turn the Internet off. That is why we can't turn off the Internet. Thank you, Mr. Chairman. It is a great pleasure to be among all of you here today. My name is Mike Emile and I am going to introduce three speakers who will give you examples of real-life applications of AI in the context of the subject at hand. They are here today because this is the type of question for which we have been preparing. They are three of our distinguished fellows at Google, along with their projects. My next fellow will present the answer to your question, sir. I want to start off by thanking Dan for his preparations on this topic. I'm very grateful to be here this morning with all of you. I'd also like to acknowledge that this whole event is being co-sponsored by the Ford Foundation which is a significant benefactor. I want to acknowledge a very good friend of ours, David Ferrucci. I'd like to give a special thanks to our own Dr. Clay Priest who is the director of research at Google. Finally, I'd like to acknowledge the University of Michigan and the generous support provided by the Joint Center for Artificial Intelligence. We all appreciate the interest in AI that you are showing. Our

Featured: Eclipse Comics If there was one comic that came out of the 1990's and still makes a big impact today, it's Eclipse Comics (and their fun-as-hell 200X variant, which they also published). Eclipses were never just about the supermen and super-women, but also the supernaturally powered adults and children, not just the enfants terribles, often with a supernatural side, sometimes even a superpower of some sort. It was "fun", and very high quality, too. Since 2000, when Comico Comics shut down and the parent company went bankrupt, Eclipse has sold through all but one of its complete runs, and issued many standalone and "Earth Prime" (2000) variant covers. So what was the impact? Well, many years later, the initial run of Earth Prime (which featured stunning art by Doug Jung, art we've featured here) was the basis of the 2008 movie, Watchmen. (Ed. Note: See our essay on Watchmen on the site for more... We're now revisiting the initial Eclipse run today, and we're looking back to one of the most famous, and influential, of the Eclipses. When you look at it today, there's really only one essential ECLIPSE. It's the Angelus. As it appears in Brian Azzarello's original (though not first) run, but also in the series that followed: the 2005 issue "Some Kind Of Wonderful" (featuring the work of awesome illustrator, Alex Maleev). The Angelus first appeared in the pages of Angel #14, where he was surprised by the Spectre. He was also then, perhaps first, instructed to attack John Constantine, although we will never know how that turned out. Eclipse's version of the Angelus is pretty, as one of the main elements of the comics as a whole were the characters themselves. It even looks like the logo we use on the site. See, the new comic Super-Man of Earth Prime was an ongoing series that hit stand alone issues too, but it was about when an ordinary person realized they had hidden power inside them. The first issue alone featured Alex Toth's cover,

plus an astonishing, spectacular, gorgeous interpretation of the interior story of a young boy
