I want to know how many times \$1\$ or \$1+1\$ behaves identically to \$1\$ or \$0\$ modulo \$2\$. More generally, for every \$\n\in\mathbb{N}\$: How many times is there \$\n\cdot1+...+1\overset{+2}{\equiv}0\$ (i.e. no times)? The answers for \$n=1\$ are, apparently, given by some complicated formula that I haven't managed to understand. If it's easier, though, we could stick to \$n=1\$ for now. Obviously, the number of times can't be greater than \$2\$, since if we're only go one way, either to \$0\$ or \$1\$, but since \$1\$ and \$2\$ are units, \$1+1\$ must be even, and so we must have the number of times \$1+1\overset{+2}{\equiv}1\$ to be \$1\$. But the next step, which must consist in applying the operation to both sides of the congruence, gives us the contradiction \$0\cdot1+1\overset{+2}{\equiv}1+1\ove
