When there are multiple types of media stored on a single CD, sometimes the standard menu doesn't display them all efficiently and it can be difficult to access them. MediaMenu is an application that allows users to both create and customize full screen menus for CD based media, making them more accessible and presentable. It is well known that it is often very difficult to find the media you want. Thus, CD-based media are being appreciated more and more by users. But when using other CD-based media, the standard of its display is not good enough. In order to improve the display style, MediaMenu's main function is to provide a user-friendly interface that is easy to use. The program is mainly used for creating and customizing the CD-based media but it can also create pop-up menus for DVD discs. Users can customize the background color of the CD's full-screen menu with three pre-made backgrounds. They also can choose from eight pre-made fonts, background images, menu text and sub-menu text, change the menu's size, color and highlight color, make sub-menu's active and non-active items bold, change the item's highlight color and size, or change the background sound. At the same time, it can add a link to media players to the full-screen menu. Moreover, users can record a microphone's voice into the CD's full-screen menu and even create a clip from it. For the screen menu of DVD discs, it can only create a blank menu and it can't be customized. It's a pity. How it works: 1. Run the program. It will ask you to choose the CD you want to customize. Then it will create a menu for you and show you how to customize it. 2. The menu is saved into the root directory of the CD and the program will prompt you to insert the CD when you start the program for the first time. 3. You can select a font, image, and background sound. 4. The selected background will be applied to the menu. 5. The selected font will be applied to the menu. 6. The selected image will be used as the menu's background. 7. Background sound will be linked to all the menu items. 8. The menu's size, color and highlight color can be changed. 9. The selected font, image and background sound will be applied to the menu. The selected font will be used for the b7e8df5c8
