March 28th at 8PM. menu. christine le duc presents de gast 12 Unions wait for end of Hockey season by jmaloni Press Release Sat, May 10th, 2013 The Sask. Party says they are hopeful to have the unions' proposals confirmed by the end of the hockey season. (PRNewsFoto/Saskatchewan Party) May 09, 2013 Media contacts: Provincial Relations Service Regina (306) 777-2497 john.maloni@gov.sk.ca The Saskatchewan government is hopeful that the unions' proposals will be finalized by the end of the hockey season. Saskatchewan Premier Brad Wall said in a news release that he has spoken with Premier Prentice about the proposals. He says the two have agreed that it is important to make significant progress in negotiations before the Pee Wee's hockey season ends. Wall says he expects to speak with the labour groups again within the next two weeks and believes that "if the Government can agree with all the groups, it should be able to present their proposals to the next negotiation date in June. "It's important for us to move this process as quickly as possible and I think the table is set for a positive outcome over the summer." Q: Improving time complexity This is the situation: A graph of N nodes is given and a subset of k nodes has to be selected. The problem is that choosing k nodes from the full graph can take a lot of time. What the algorithm should do is iterate through all nodes and for each of them test if they belong to the subset. For each node in the subset, the algorithm checks if the subset contains the whole node(s). If they are not, the node is added to the set to be removed. If they are, then the node is chosen and removed from the set. My problem is that when selecting the nodes the complexity is  $O(N^2)$ , but iterating through all nodes is  $O(N)$  and checking the condition ( $\text{not}(\text{node in subset})$ ), is  $O(1)$ . But for  $N > 1,000$  the sum of the running time is  $O(N^2)$  and  $O(N)$ . I think
