2D (or Vector) drawing style sheets, which provides the ability to style drawing elements with shapes or text. AutoCAD scripting language, which is similar to Visual Basic for Applications and enables users to automate various tasks using a scripting language. It also supports object-oriented programming. Typical features in a typical AutoCAD installation include: The drawing application can be used to create 2D and 3D objects. The standard and student editions of AutoCAD can be used to create AutoCAD drawings, and post-processor files (DWG, DXF, and PLT), which are exchanged among various CAD programs. A set of API functions is available for customization and automation. An AutoLISP programming environment is available for customizing the drawing application using a LISP-like language, or for creating AutoCAD plugins. The ability to create your own applications, known as AutoCAD Plug-ins. The ability to install third-party add-ons and plug-ins, including those for 3D graphics and technical documentation. The current version of AutoCAD is AutoCAD 2016, which was released on June 23, 2016. AutoCAD scripting and Python AutoCAD can be used with the scripting language LISP or Visual LISP, and by third-party programmers with AutoLISP. AutoCAD's scripting language is a mixture of Structured Query Language (SQL), object-oriented programming, and a variant of the LISP language known as AutoLISP. AutoLISP is similar to Lisp. It offers a simple mechanism for redefining the data type system (i.e. integer, real, etc.), which is helpful for converting between floating point and integer values. It also includes support for lists and sets. It provides a mechanism for defining and executing user-defined functions (UDFs). On January 19, 2016 Autodesk announced that it would be releasing AutoLISP as a free open source product. AutoCAD supports .NET scripting, which is based on C#. The latter is also used to create PostScript, pdf, LaTeX, Word Processing, and Graphical User Interface plugins for AutoCAD. An AutoCAD
