Field of the Invention The invention relates to an electrical connector, and more particularly to an electrical connector which includes a pair of modular housings assembled with each other by an elastic snapping fastener. 2. The Related Art U.S. Pat. Nos. 6,296,821 and 6,339,236 respectively disclose a first housing in an electrical connector and a second housing in another electrical connector assembled with each other by an elastic snapping fastener for easy replacement. U.S. Pat. No. 6,450,186 discloses a design of electrical connector which includes a first housing and a second housing assembled with each other by a cover and a button. A conventional electrical connector disclosed in U.S. Pat. No. 6,296,821 comprises an insulative base member with a plurality of contacts and a metal base plate soldered with the insulative base member. The contacts are disposed in the insulative base member for receiving mating terminals. The metal base plate is welded onto the insulative base member for grounding
